

Research Projects currently being handled as Principal Investigator:

To study the transcriptional control of CD147 expression in glioblastomas using cell lines (2015-2018, Supported by DBT, Govt. of India)

To study the interplay of proinflammatory cytokines and chemokines associated with the innate immune system with concomitant microRNA expression profile from adipocytes and macrophages using cell lines under co-culture conditions mimicking obesity (2015-2016, Supported by Intramural Research grant)
